

Bernard Controls Announces a Major Event

For the Quarter-Turn Actuator Market

Worldwide leading electric actuator manufacturer L. BERNARD and USA subsidiary Bernard Controls Incorporated has introduced a new extended range of quarter-turn electric actuators primarily for use in the water and wastewater and industrial markets, enabling the proven innovator of electric actuators and controls systems to provide larger torque quarter-turn actuators from 100 up to 88,000 in-lbs available for quick delivery.

Like all of the products L. BERNARD manufactures, this new and extended offering is produced and backed by the same product design and quality that L. BERNARD is known for around the world and in all markets and demanding services.

Electric actuators for all types of service from standard on-off to high precision Class II modulating service are available. Most standard on-off actuators are available from stock with options for modulating and integral controls available in 3 to 4 weeks.

Please contact your local Bernard Controls distributor or Bernard Controls home office direct in Houston, Texas at 281-578-6666 for more information.
