

Evolution of BC explosion proof multi-turn STX range:

STX61

BERNARD CONTROLS, global electric actuator specialist, improves its offer for explosion proof multi-turn actuators by updating its STX range as follows:

- **Improved compactness:** Replacement of our former STX60 model by a STX61 with reduced size & weight to ease installation design and mounting on valve. Current orders will be delivered with STX60, except in case of special requests & agreement with your sales contact. New orders will be placed for STX61 as for now. Delivery from July, 17th 2015.
- **Improved temperature range on all models:** now certified up to -60°C.
- **Additional higher speeds on STX20 & STX40 models** - 190rpm, to address customers' specific needs, especially in case of combination with quarter-turn or multi-turn gearboxes.

As part of the STX range, these models offer all the key features and benefits of the range, including **enhanced reliability & user-friendliness** with INTELLI+® intelligent control system & non-intrusive settings, absolute sensors... but also **enhanced security** with key functions to ensure protection of your valve and your site (signaling continuity, partial stroking, ESD, SIL certification...).

All these models are already available for order from BERNARD CONTROLS sales teams all around the world. Do not hesitate to contact us to get information on these new models, or on our explosion proof ranges - SQX & STX. Product catalogue is available as a PDF on our website:
